Business Intelligence

I am writing to you to apply for the Internship of Business Intelligence at RaskRask ApS.

A Business Intelligence Student with a Strong Interest in Data Analysis

I am a 2nd semester Business Intelligence Master's student at Aarhus University with a background from Hungary and Venezuela. My program's aim is to prepare me for the data-based support of management decision making and data analysis that result in the creation of real business value. I am particularly interested in RaskRask ApS because it is a firm that focuses on Data Science solutions. Data Science is one of today's most exciting emerging business areas and the reason why I aspire to be part of a team that takes on such a challenge. Moreover, as the internship requires data collection and analytical skills, which are the focus of my master's degree, I would fulfill this position with a great sense of responsibility and enthusiasm.

Strong Data-Driven Decision Making and Communication Skills

As an intern, I could combine my experience in SQL and Excel to carry out complicated data gathering and thorough data cleaning, and I could utilize my knowledge of R to perform delicate data analysis. These skills allow me to effectively discover trends and patterns in data out of which I am able to identify valuable business insights that support relevant data-driven decision making. As part of my education I have also been introduced to Power BI for the purposes of communicating and visualizing these insights clearly and concisely to stakeholders.

I have work experience in communicating with international clients in a variety of foreign languages, thus I am confident both in writing and speaking in English, Spanish and Hungarian. Furthermore, I am comfortable with working both in a team and individually, and solving problems under time constraints, all of which I could contribute with to the work done at RaskRask.

Eager Individual with a Flair for Team Environments

I am an outgoing and flexible student who enjoys being challenged and who thrives in environments where being proactive is encouraged and responsibility is placed on the individual. However, it's teamwork where I feel most comfortable in, which is the reason behind having studied in Denmark for the past 4 years, where group-based projects are heavily emphasized. That is why I want to work for a firm that shares the same drives for data analysis and team settings too, and why I am eager to be a part of your team at RaskRask.

I look forward to hearing from you.

Best regards,

Miguel Angel Kóthay
