

# Sample results week 12

**1.1) Forward pass: Calculate the values of  $z_1$ ,  $z_2$ , and  $y$**

$$z_1 = 0.0 \quad z_2 = 0.76 \quad y = 1.572$$

**1.2) Compute the mean squared error**

$$E = 0.0916$$

**1.3) Using backpropagation, compute the gradient of the error w.r.t the weights  $w^{(2)}_2$  and  $w^{(1)}_{2,2}$**

$$\begin{aligned} &-0.3253 \\ &-0.1883 \end{aligned}$$

**1.4) Compute the updated weights for  $w^{(2)}_2$  and  $w^{(1)}_{2,2}$**

$$w^{(2)}_2 = 2.2325 \text{ and } w^{(1)}_{2,2} = 2.2188$$

## 2) PyTorch: 2-layer MLP for classification

```
Train Epoch: 1 [0/60000 (0%)] Loss: 2.282346
Train Epoch: 1 [3200/60000 (5%)] Loss: 2.192860
